

PRESS RELEASE

Jetten Yachting is introducing a new standard:

The Jetten 50 Multi Purpose Cruiser, the ultimate and durable motor yacht.

The combination of the latest techniques and a unique design with innovative taut lines make the Jetten 50 MPC unique in its class. The exclusive motor yacht suitable for everybody! The Jetten 50 MPC is the outcome of an intensive collaboration between Jetten Yachting and Vripack architects, leaders in water sports. "There is such a considerable interest in this vessel that we have already sold five vessels for delivery next year based on the drawings," says Marcel Jetten, the managing director.

Last year, Jetten Yachting joined forces with the top architects of Vripack in Sneek. A year of intense collaboration yielded a beautiful and unique result: The vessel's amazing lines are design-technical tours de force. Those flowing lines with a small kink in the sheet metal, the hand rail integrated into the glass of the superstructure, the sunken windlass, the glass panel in the front section of the superstructure, and the angular exhausts designed specifically for this vessel give the 50 MPC its unique identity.

The Jetten 50 MPC's design follows the mid-cabin concept. This means that the owner's cabin is located in the centre part of the vessel. This design provides you with maximum comfort and maximum space. The panoramic window offers you a fantastic view of your surroundings. The available space in the owner's cabin accommodates a sizeable bed, an actual walk-in cupboard, and your own separate bathroom. Comfort in its most optimal form.

The front section of the Jetten 50 MPC has a VIP room with a detached bed and a visitor's cabin, each with its own bathroom. In the case of the three-cabin version, an exceptional feature of this vessel is that the cabin on the port side can be tailored to your specific needs by means of the unique 'easy convert cabin system'. In a blink of an eye, the cabin can be converted into an office with a desk or a luxury cabin with a bunk bed.

The Jetten 50 MPC is available as a displacement or half glider yacht and is outfitted standard with a fuel-efficient 6-cylinder Deutz diesel engine with 170 h.p. However, it can also be outfitted with two engines with up to 800 h.p. combined, enabling a top speed of 16 knots. With these features, the Jetten 50 MPC offers considerable sailing comfort, whether in the Mediterranean Sea or on a luxury cruise to Scandinavia. The 50 MPC is 14.95 metres long, 4.80 metres wide, and has a draught of 1.35 metres.
